

www.leak.net

LEAK.NET WANTS YOU to be an active partner in your roofing decisions. Our software gives you 24/7 access to your data from anywhere. Features include:

- Online leak reporting, email and cell notifications
- Data entry and tracking for leaks, proposals, jobs, and invoices
- Uploading and storage of specs, drawings, photos, and files
- Standard and custom reports, daily inspection reports
- Filtering by customer, region, facility, building, and section data
- Project management, user levels, and data security

Experience

Our extensive experience in roofing diagnostics, repair, work flow, and process management has been incorporated into the Leak.Net software. We have refined this system over a ten year period, taking advantage of Web technologies to make it robust, user-friendly, and always available to you.

Knowledge

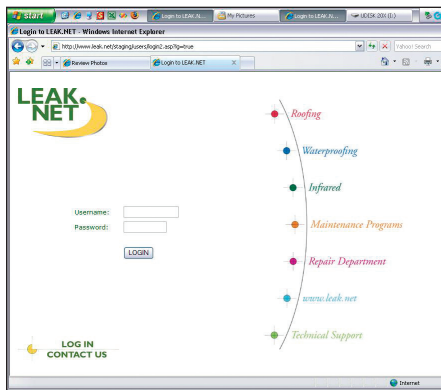

Accurate and timely knowledge of your facility data and your work progress aids your project management efforts. The Leak.Net software puts this important information in an easily-accessible format — 24 hours a day, 7 days a week. Whether you want to know more about project progress or specific data points, you'll find it in this powerful database of information.

Approach

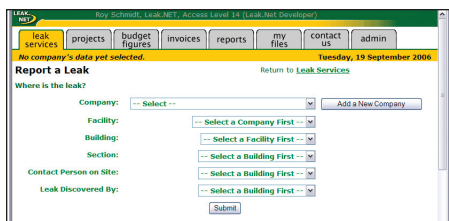

The Leak.Net system uses a work-flow approach to tracking leaks, managing proposals, creating projects, maintaining project status, and tracking invoices. A user reports a leak, and the software immediately sends e-mail, fax, and cell notifications to as many personnel as you want. The system stores leak investigation details and cost history, and tracks work proposals, accepted jobs, and daily progress reports.

Accountability

The Leak.Net system consists of a database and software that are designed and managed solely by Leak.Net, ensuring that your data remains secure. Discrete, assignable user access levels provide a simple, safe method of controlling access to your data and files.

WWW.LEAK.NET
The clean Leak.Net interface and navigation process were designed with the customer in mind.

DATA SELECTION
Once your data is in the Leak.Net database, you simply choose your building, the section, and the data you're looking for.
